1 Results

We have solved the model in Julia. We plot here the value function and the change in capital function $(k' - k)$. No results were asked for but I quite enjoyed this problem set.

Value(k)|K = 13.275862068965518

k_prime(k) - k|K = 13.275862068965518
